

Introducing CraneCAM™

CraneCAM™, part of the **CraneSAFE™** range, is an optional extra designed to enhance the security of the tower crane. It can be installed independently to protect hoists, Haki staircases and other vulnerable high risk access points.

CraneCAM™ offers HD quality images during day or night by using advanced Artificial Intelligence (AI). When an activation is confirmed, the system provides a local visual and audible warning, and can alert the site contact using a mobile network, or alert our NSI Gold monitoring station.

Key Features:

- No mains-power required
- Typical 1-year battery life
- HD quality images
- Integrated AI technology
- Powerful cloud based platform
- User friendly app
- Monitoring 24/7, 365 days
- Can link multiple cranes
- Military grade system
- 2G/3G/4G bridge to cloud

HOW IT WORKS?

Upon detection, the CraneCAM™ wireless PIR cameras take HD quality images using our integrated day or night cameras.

Images from the devices are wirelessly sent back to a bridge device which instantly forwards the images to our cloud platform using the mobile network.

When the platform receives the images, they are immediately analysed by our advanced AI engine to identify whether there is a genuine intrusion for an alarm operator to attend to.
